

FSD– Node.js class test:

Problem Statement-

Develop a Node.js application using only the built-in `http` and `fs` modules.

The application should manage Student Records stored in a text/JSON file.

Requirements

1. Create HTTP Server

- Create a Node.js HTTP server using the `http` module.
- Server should run on port `3000`.
- Display a welcome message when the server is opened.

2. Student Record Form

When the user visits the application, display an HTML form containing:

- Student Name
- Roll Number
- Course
- Email
- Add Student button

The HTML should be served using the Node.js `http` module.

3. Store Student Data

When the user submits the form:

- Receive the data through the HTTP request.
- Store the student record in `students.json` using the `fs` module.
- Do not use Express or any external package.

4. Display Student Records

Create a route such as:

`/students`

- Put this code in the new github repository and share **Repository** LINK in shared form
